Confirmation No.: 2318

IN THE CLAIMS:

5

20

Please amend the claims as indicated below.

- 1 (Currently Amended) A first wireless communication device, comprising:
- a controller capable of receiving an acknowledgement (ACK) message transmitted by a second wireless communication device in response to a message transmitted by said first wireless communication device, and
- a collision detector that monitors a wireless medium for collisions of said acknowledgement message.
- 2. (Original) The first wireless communication device of claim 1, wherein said collision detector evaluates an energy level and detects a collision based on said energy level.
- 3. (Original) The first wireless communication device of claim 2, wherein said collision detector includes a payload detector and detects a collision based on a detected payload.
 - 4 (Original) The first wireless communication device of claim 3, wherein said collision detector includes a preamble detector and detects a collision based on a detected preamble.
 - 5 (Currently Amended) The first wireless communication device of claim 1, wherein said collision detector is activated after said <u>first medium access</u> wireless communication device transmits data.
- 6. (Original) The first wireless communication device of claim 1, wherein said collision detector does not detect a collision if an ACK message or data header is received.

Confirmation No.: 2318

7 (Original) The first wireless communication device of claim 1, wherein said device is implemented in accordance with the IEEE 802.11 Standard

- 8 (Currently Amended) The first wireless communication device of claim 1,
 5 wherein said controller determines if said second wireless communication device correctly received said transmitted message by monitoring said a-wireless medium
 - 9 (Original) The first wireless communication device of claim 1, wherein said controller determines that said second wireless communication device did not likely receive said message if a collision is detected.

10

20

25

- 10. (Original) The first wireless communication device of claim 1, wherein said controller determines that said collision was a cause of not receiving said ACK message.
- 15 11 (Currently Amended) A method for detecting a collision in a wireless communication network, said method comprising the steps of:

determining if an acknowledgement message is received in response to transmitted data; and

monitoring said wireless communication network to detect a collision of said acknowledgement message.

- 12 (Original) The method of claim 11, wherein said monitoring step evaluates an energy level and detects a collision based on said energy level
- 13. (Original) The method of claim 12, wherein said monitoring step further comprises the steps of detecting a payload and detecting a collision based on a detected payload.

Confirmation No.: 2318

14 (Original) The method of claim 13, wherein said monitoring step further comprises the steps of detecting a preamble and detecting a collision based on a detected preamble

15 (Currently Amended) The method of claim 11, wherein said monitoring step is activated after said transmitted method transmits data is transmitted.

10

15

20

25

- 16. (Original) The method of claim 11, wherein said monitoring step does not detect a collision if an ACK message or data header is received
- 17 (Original) The method of claim 11, wherein said method is implemented in accordance with the IEEE 802.11 Standard.
- 18 (Currently Amended) A method for detecting a collision in a wireless communication network, said method comprising the steps of:

determining if an acknowledgement message is received in response to transmitted data; and

monitoring said wireless communication network to detect a collision of said acknowledgement message if a measured energy level exceeds a predefined threshold.

- 19 (Currently Amended) The method of claim 18, wherein said monitoring step further comprises the step of detecting a payload and said collision detection is further based on said a-detected payload.
- 20. (Currently Amended) The method of claim 18, wherein said monitoring step further comprises the step of detecting a preamble and said collision detection is further based on said a-detected preamble.

Confirmation No: 2318

21 (Original) The method of claim 18, wherein said monitoring step is performed after said data is transmitted.

- 22 (Original) The method of claim 18, wherein said monitoring step does not detect a collision if an ACK message or data header is received.
 - 23 (Original) The method of claim 18, wherein said method is implemented in accordance with the IEEE 802.11 Standard.
